

Where's SQLDes?

So what happened with SQL Designer? To be honest we don't know either. Mihai and I came up with this slick solution, but time to market, whether we should charge for it, and being just way to darn busy has made it near impossible to keep up with it. So what now? Well to be honest, if we were to release it, you guys would think boy this code looks old. Especially, with the newer toolkits that make it so much easier to do this kinda stuff.. Dojo, Prototype.. and our new favorite YUI. Also take a look at Jack Slocum's yui-ext, this guy is one heck of a programmer.

So SQL Designer is not dead, just hibernating. But the bear is up, and we will be releasing something. Keep coming back, we'll keep you posted.
